

As we speak, the aquifer of the East Fork Lewis River, Clark County's only "sanctuary stream" is in the process of being destroyed by irresponsible gravel mining, while county, state and federal agencies look the other way.

Plus---eroding banks continue to smother the lower river with sediment and silt loads.

Let's stop this insanity now!

Support those who really care about restoring the river and returning our ESA listed salmon and steelhead back to health.
