

# Weekly Pertussis Update for Clark County

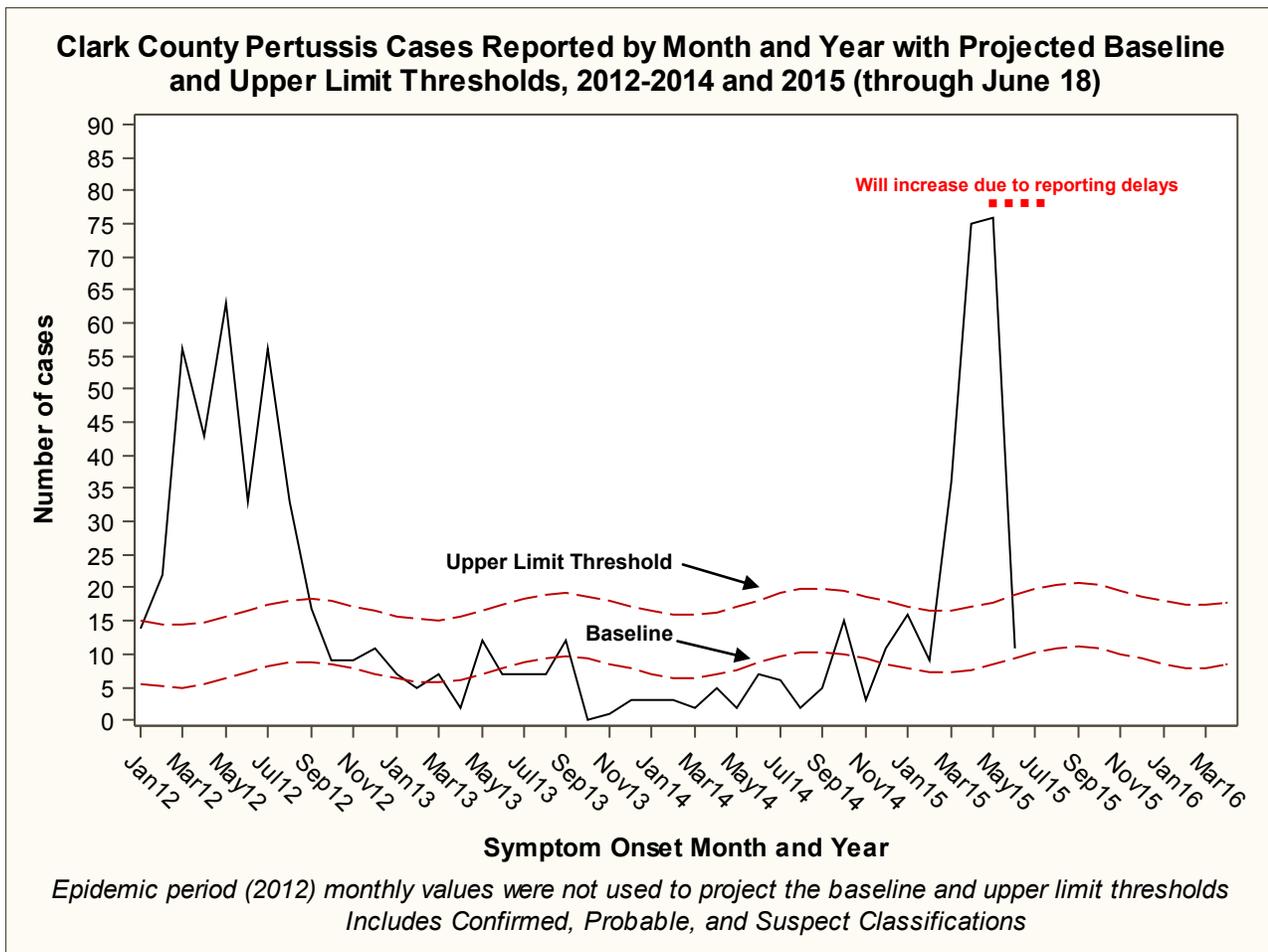

2015 year to date (YTD) cases through 6/18/2015

- Clark County is currently experiencing an outbreak of pertussis (whooping cough).
- There have been a total of 223\* cases (confirmed, probable, and suspect) reported in Clark County through June 18, 2015, compared to 17 cases during the same time last year (Table 1).
- 82.6% of pertussis cases with symptom onsets in 2015 are <19 years of age.
- 3 cases have been hospitalized, of which 1 is an infant. There have been no deaths reported.
- 27.7% of cases report not being up-to-date on their whooping cough vaccines or don't know if they are up-to-date.

**Table 1. Number of Cases with Symptom Onsets between January 1 and June 18, 2012-2015**

Year	Number of Cases as of June 18
2012 <sup>β</sup>	215
2013	38
2014	17
2015	223

<sup>β</sup>Epidemic Year

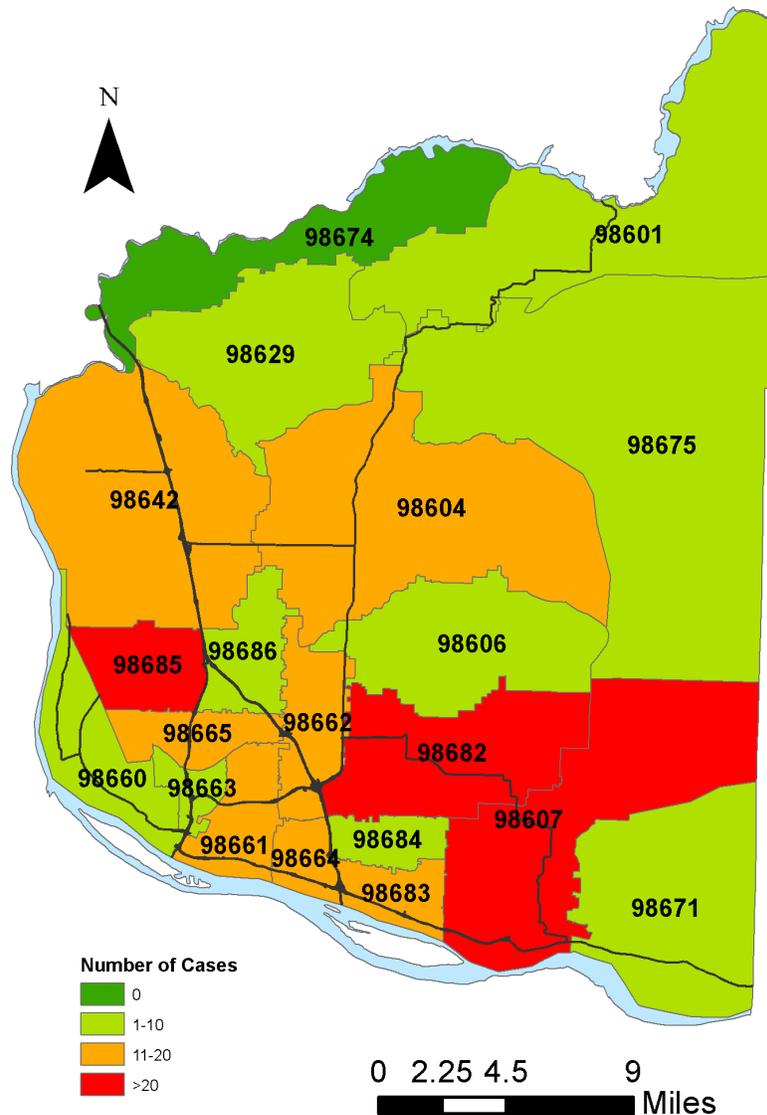

\*Please note that case counts may differ from State-level data. Clark County includes cases classified as suspect, as well as cases that have not yet been assigned a classification by Washington Department of Health. Case counts are preliminary and subject to change.

**Table 2. Clark County pertussis cases by age group, 2015 YTD**

Age Group (years)	2014 Population Estimate	Number of cases	Rate per 100,000 persons	% cases by age group
<1	5,287	7	132.4	3.1
1-4	22,480	18	80.1	8.1
5-9	30,662	12	39.1	5.4
10-13	25,975	39	150.1	17.5
14-18	31,096	108	347.3	48.4
19-24	33,119	3	9.1	1.3
25-44	114,699	11	9.6	4.9
45-64	119,432	19	15.9	8.5
65+	60,050	6	10.0	2.7
All ages	442,800	223	50.4	.

## **Technical Notes**

**2015 Cases of pertussis were included in this report if they met the following criteria:**

1. Resident of Clark County
2. Symptom onset date during annual year (January 1, 2015—YTD)
3. Meets confirmed, probable, or suspect case definition as defined by the [Washington Department of Health Public Health Investigation Guidelines](#).

This report is intended to inform Clark County community members of the impact of pertussis, including sub-populations and geographic areas affected, as well as the timing of increasing numbers of cases.

To meet the needs of the intended audience, pertussis cases are classified into annual years and months, rather than epidemiological years and weeks.
